阿怪：音樂人就該用 Django

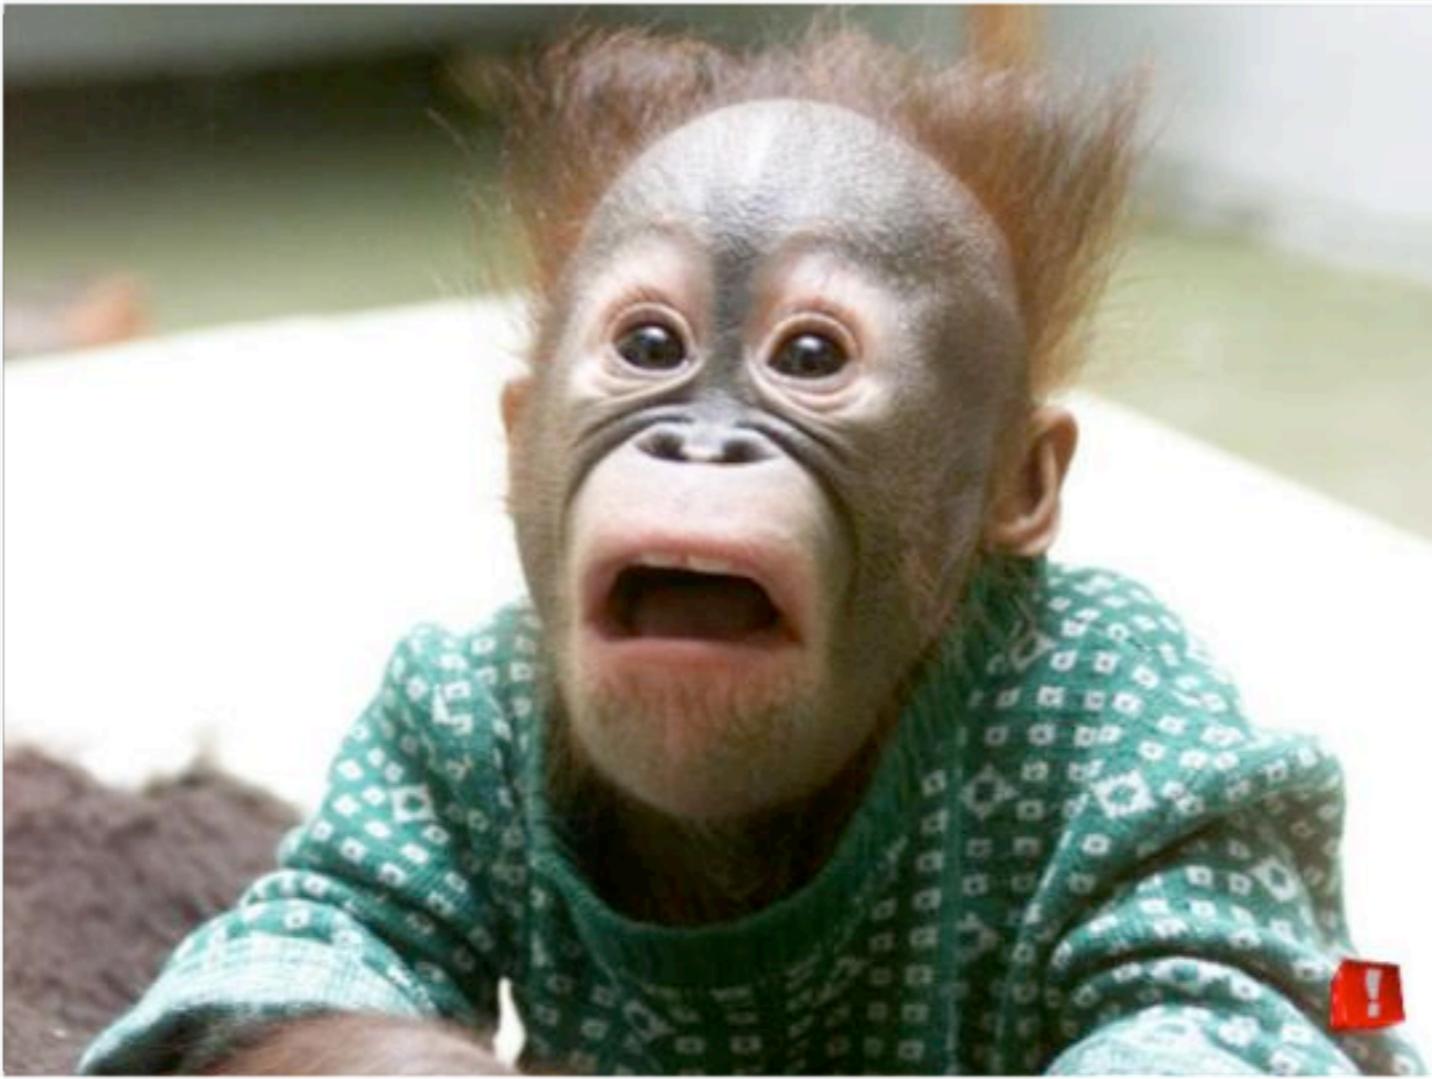

但其實說服老闆

我是用唬爛的

因為我當時根本不會寫
Python 阿!

Migrate

I have to run
Django / ASP
at the same time!

I port User data first

Single sign on

to make both Django/ASP login at the same time

NGINX

/music/*

/account/*

django

/anything not ported

ASP Active
Server Pages

Migrate database

from Microsoft SQL Server 2000 to MySQL

Migrate file structure

I have to move lots of files, and update database

**Since StreetVoice has been
running for 3 years, so ..**

There are so many data

A dramatic photograph of a highway at night under a dark, turbulent sky. A massive, bright orange and yellow fire or explosion erupts from the left side of the frame, casting a powerful glow over the scene. Intense white lightning bolts strike down from the clouds above, illuminating the smoke and fire. The highway below is filled with streaks of light from moving vehicles, creating a sense of speed and intensity. In the background, city buildings are visible against the fiery horizon.

It's Hell ...

I repeated all these
steps, again and again

After 1.5 year

we finally
killed
Windows / ASP

What took me so long?

lots of cases
and support

like...

WE ARE YOUNG,
SHOULD BE **WILD.**

2012 簡單生活節

簡單生活祭 · 簡單生活的更多可能

**and there are cases
I don't even want to talk**

Training people

everyone knows nothing about open source stuff

**From no VCS, then
Mercurial, now Git**

What we use now?

Message Queue: Celery + RabbitMQ

C Celery

```
from celery import task  
  
@task()  
def encode_audio(song_id, bitrate):  
    ...
```

Celery: Distributed Task Queue

Celery is an asynchronous task queue/job queue based on distributed message passing. It is focused on real-time operation, but supports scheduling as well.

The execution units, called tasks, are executed concurrently on a single or more worker servers using multiprocessing, Eventlet, or gevent. Tasks can execute asynchronously (in the background) or synchronously (wait until ready).

Celery is used in production systems to process millions of tasks a day.

 Documentation

Search doesn't have to be hard. Haystack lets you write your search code once and choose the search engine you want it to run on. With a familiar API that should make any Djangonaut feel right at home and an architecture that allows you to swap things in and out as you need to, it's how search ought to be.

Haystack is [BSD licensed](#), plays nicely with third-party apps without needing

Haystack 1.2.7
Posted on 2012/04/06 by Daniel
The final release of the Haystack 1.X series, v1.2.7, has been released & pushed to PyPI. This release features a number of bugfixes as well as incorporating the addition of the `.values()`/`.values_list()` methods. This release is

Exception Logging: Sentry

Sentry

Ship with confidence.

Sentry notifies you when your users experience errors in your web and mobile apps.

[See plans and pricing](#)

[Pricing](#) [Docs](#) [Blog](#) [Sign in](#)

The screenshot shows the Sentry web interface. At the top, there are tabs for 'Sentry', 'Events', and 'Team'. Below the tabs, there's a search bar and some filter options like 'Resolve Feed', 'Pause Updates', 'Sort by: Last Seen', and 'Since: Jan 17th'. On the right side, there are several dropdown filters for 'BOOKMARKS' (set to 'All Events'), 'STATUS' (set to 'Select a status'), 'BROWSER' (set to 'Select a browser'), 'LEVEL' (set to 'Select a level'), 'LOGGER' (set to 'Select a logger'), 'OS' (set to 'Select a os'), and 'SERVER NAME'. The main area displays a list of error events. Each event is represented by a colored circle (grey, red, orange, blue) containing a number (144, 21, 970, 2.5k, 3), followed by the error type ('sentry.management.commands.send_fake_data in exception') and a detailed message ('SyntaxError: foo must come before bar'). The timestamp for each event is '2 days ago' and the location is 'root' or 'foo.bar'. There are also 'Bookmark' and 'Star' icons next to each event entry.

We even open source now just get started

The screenshot shows a GitHub profile page for the organization "StreetVoice". The profile header features the "STREET VOICE" logo. The main navigation bar includes links for "Explore", "Gist", "Blog", and "Help". The user's profile picture is shown next to their name, tzangms. A search bar and a gear icon are also present.
