OpenStack Cinder Tutorial

康佳峰 (K.K.)

CCMA/ ITRI

2013/4/29

Outline

- OpenStack
- Volume
- OpenStack Cinder
- Cinder driver status
- Contributions
- References

OpenStack (1/2)

- An IAAS cloud computing project and open source software under Apache License.

- Rackspace and NASA launched it in Jul. 2010, and OpenStack Foundation managed it since Sep. 2012.
  - ~ 200 companies or organizations have joined the project

- It consists of a series of interrelated project CODEs that control and provide the provision resources through a datacenter.

工業技術研究院
Industrial Technology
Research Institute

OpenStack (2/2)

- Adopted a six-month release schedule
  - Grizzly, Apr. 2013

- Primary released on Linux, Ubuntu LTS

- Cloud computing management layer that integrate existing Linux technologies
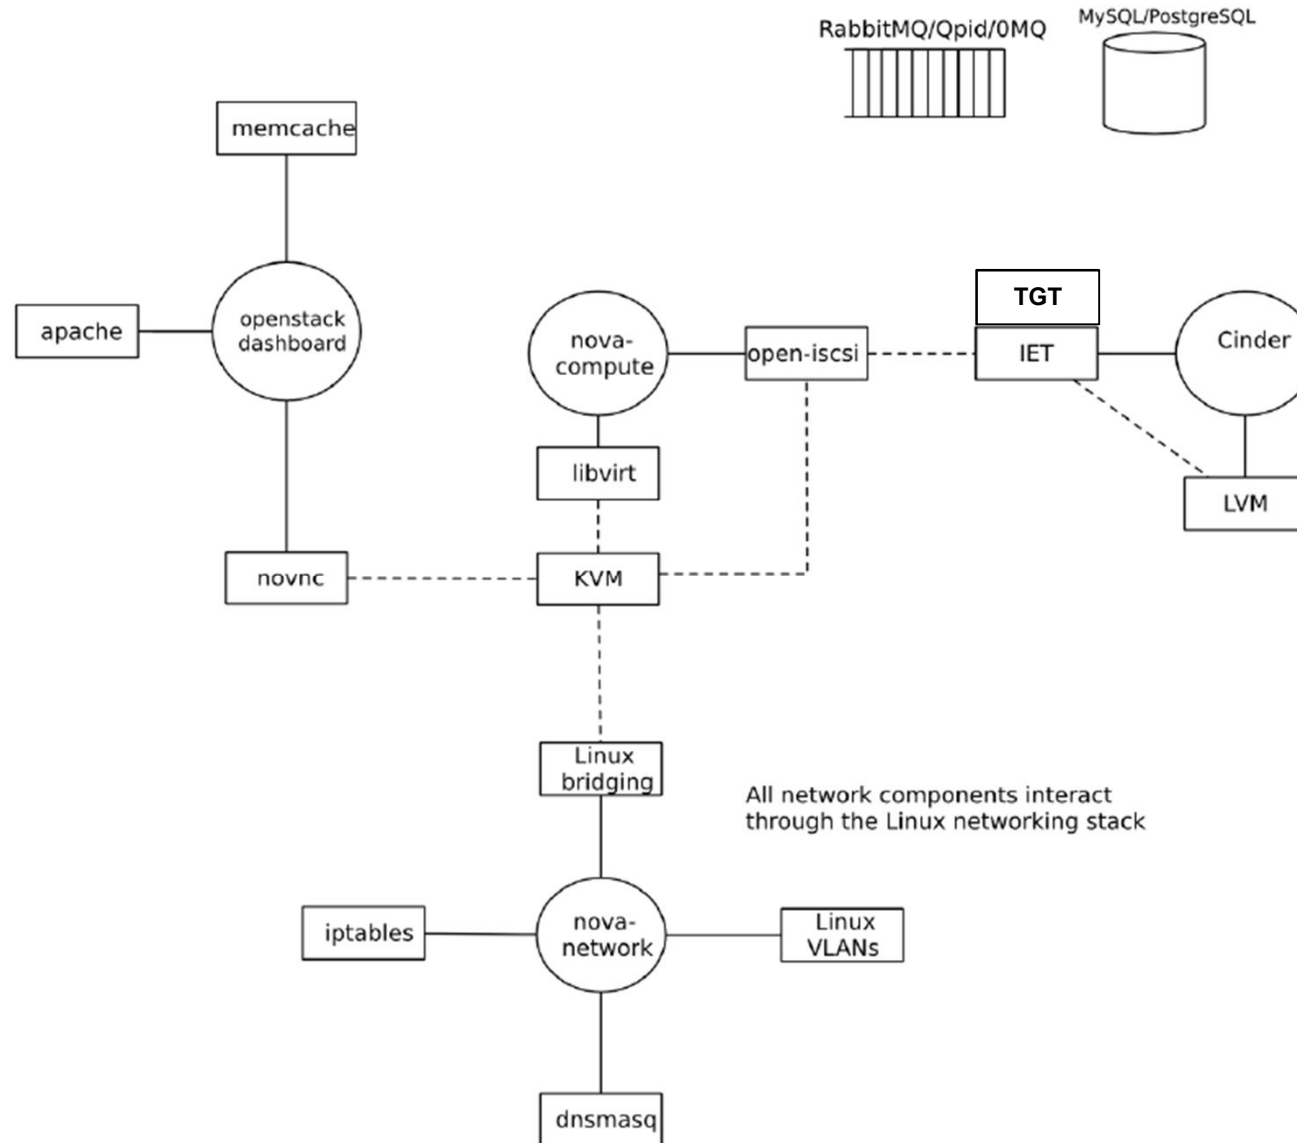

- Python implementation

Service Architecture
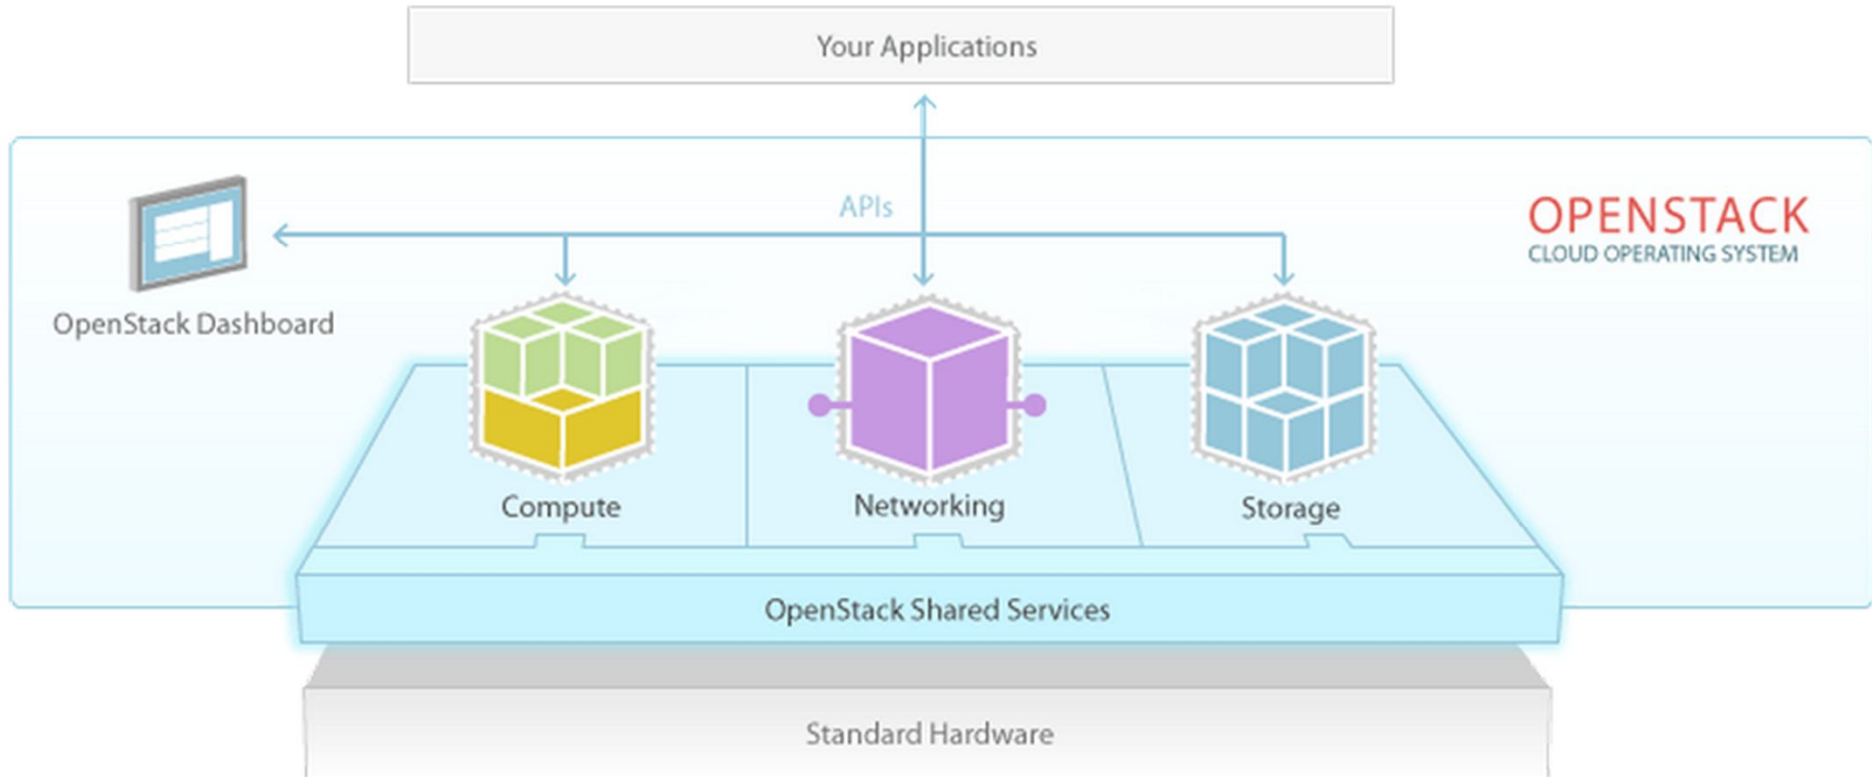

OpenStack Code Names

Service	Code name/Software Project
Compute	Nova
Image	Glance
Object Storage	Swift
Dashboard	Horizon
Identity	Keystone
Networking	Quantum
Volume	Cinder
…	…

工業技術研究院
Industrial Technology
Research Institute

Technology Topologies

Volume

Physical Disk	Partition	Drive/Volume	Filesystem
Hard Disk 1	Partition 1	/dev/hda1	ext3
	Partition 2	/dev/hda2	xfs
Hard Disk 2	Partition 1	C:	NTFS
	Partition 2	D:	FAT32

A partition, physical drive, is a part of one physical hard drive.

A volume, logical drive, is a single accessible storage area with a single file system.

OpenStack Cinder

- Cinder allows you to give block level storage to your OpenStack Compute instances.
  - Extra block device or boot-from-volume device
  - Storage Access Network (SAN)
  - **Amazon EBS**

- The basic Cinder usage is iSCSI-exposed LVM volumes.
  - Two basic default components
    - **lvm2**
    - **open-iscsi/iscsi-target**

- https://wiki.openstack.org/wiki/CinderMeetings
  - Meets on a weekly basis in #openstack-meeting at 16:00 UTC on Wed.
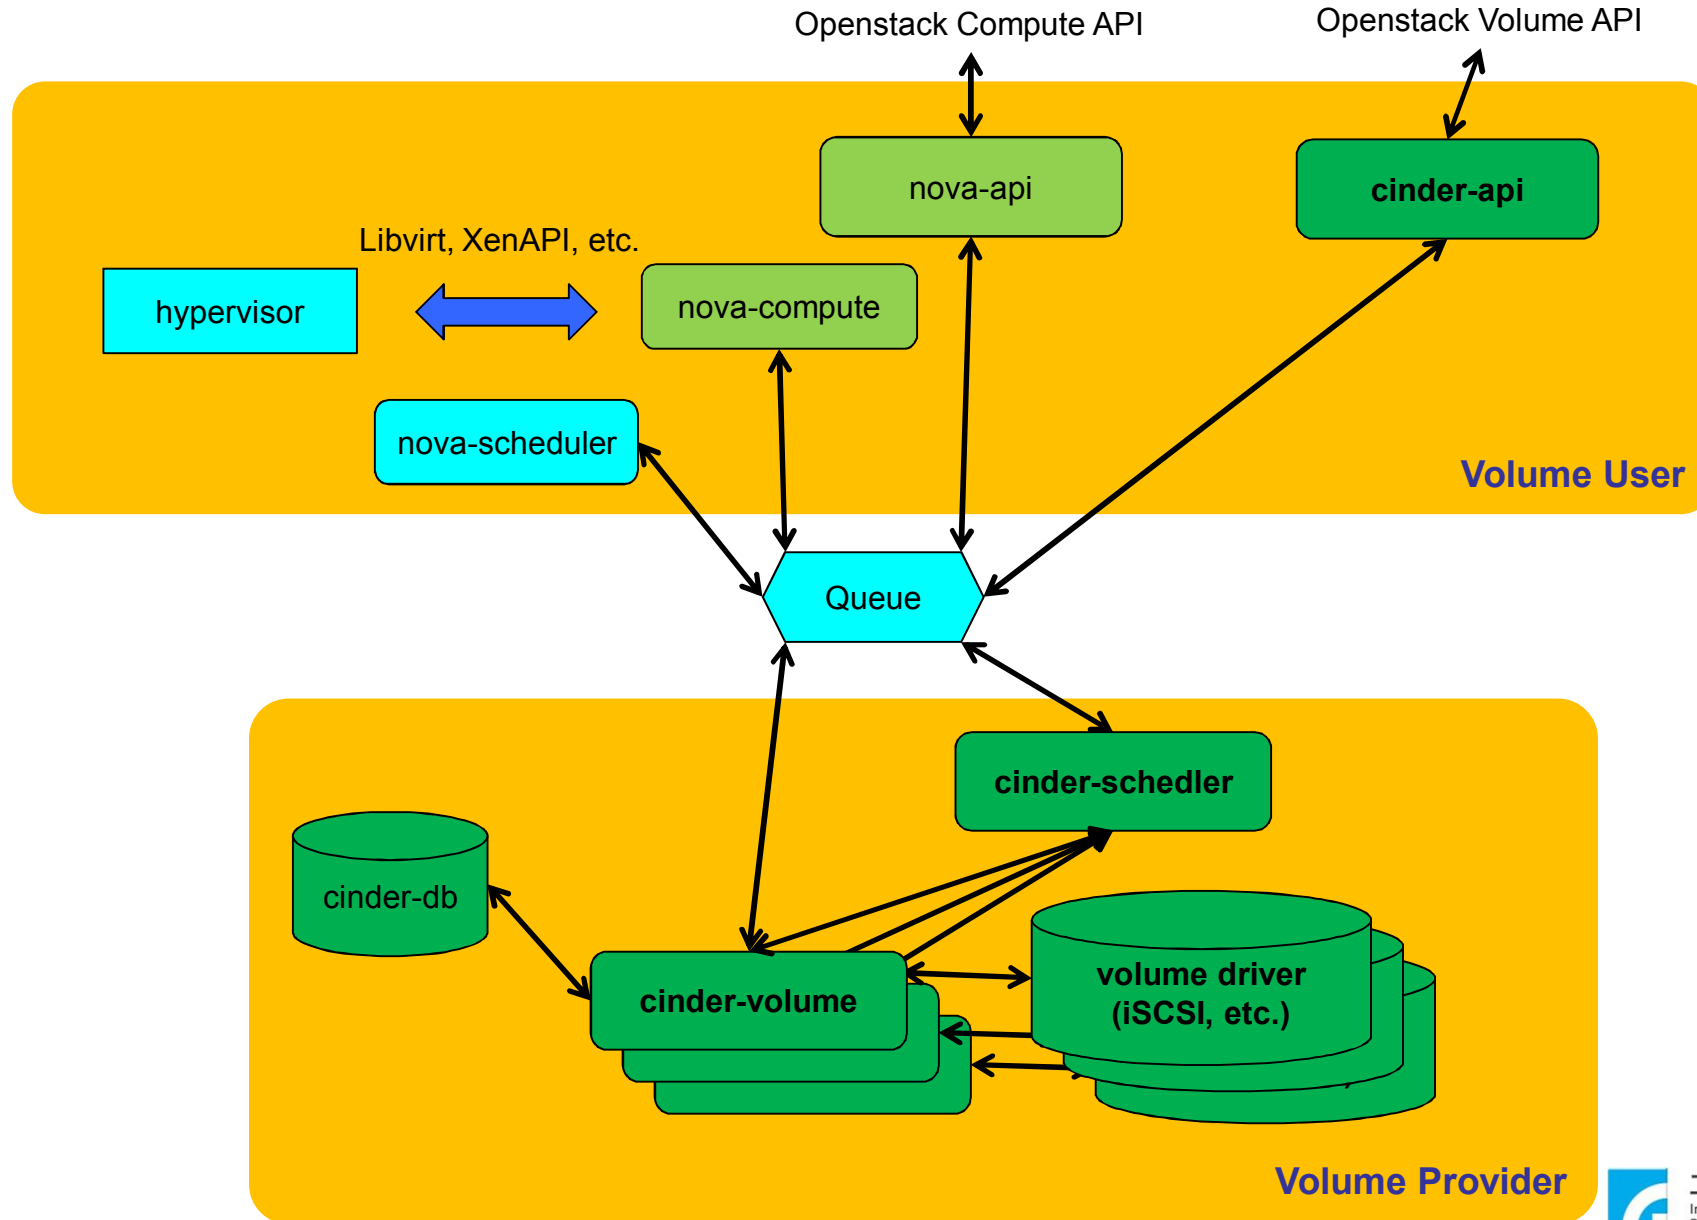

Cinder History

- **Grizzly: 2013.1 (Apr. 2013)**
  - **Cinder**

- Folsom: 2012.2 (Oct. 2012)
  - Nova (Compute)
    - Volume
  - Cinder

- Essex: 2012.1 (Apr. 2012)
  - Nova (Compute)
    - Volume
  - …

Research Institute

Cinder Services

- ## cinder-api
  - Authenticates and routes requests throughout the block storage system.

- ## cinder-scheduler
  - Scheduling/routing volume create requests to the appropriate volume service.

- ## cinder-volume
  - Managing block storage devices, specifically the back-end devices themselves.

Cinder Interaction

Openstack Compute API

Openstack Volume API

Volume User

hypervisor

Libvirt, XenAPI, etc.

nova-compute

nova-api

cinder-api

nova-scheduler

Queue

Volume Provider

cinder-db

cinder-schedler

cinder-volume

volume driver (iSCSI, etc.)

Cinder Internal

- Cinder deployment
- Volume operations
- Volume stack
  - LVM/iSCSI
- Implementation
- Driver Status

工業技術研究院
Industrial Technology
Research Institute

Cinder Deployment

- Ubuntu 12.10

- Package
  - # apt-get install cinder-api cinder-scheduler cinder-volume open-iscsi python-cinderclient tgt

- Configuration file:
  - /etc/cinder/api-paste.init, /etc/cinder/cinder.conf, /etc/nova/nova.conf, /etc/nova/nova-compute.conf

- Create storage space: (iSCSI-exposed LVM)
  - LVM partition with VG name = 'cinder-volumes'

- Services
  - sudo service cinder-volume restart
  - sudo service cinder-api restart
  - sudo service cinder-scheduler restart

工業技術研究院
Industrial Technology
Research Institute

Volume Operations

- Create/Delete volume
- Create volume from snapshot
- Clone volume
- Create volume from image
- Copy image to volume
- Create/Delete snapshot

- Attach/Detach volume

工業技術研究院
Industrial Technology
Research Institute

Usage by Example

```
# cinder create --display_name test 1
# cinder list
+--------------------------------------+-----------+--------------+------+-------------+--------------------------------------+
|                 ID                   |  Status   | Display Name | Size | Volume Type |             Attached to              |
+--------------------------------------+-----------+--------------+------+-------------+--------------------------------------+
| 81c8c61c-4889-423e-a9f4-05663b1e4b48 | available |     test     |  1   |    None     |                                      |
+--------------------------------------+-----------+--------------+------+-------------+--------------------------------------+
# nova volume-attach vm1 81c8c61c-4889-423e-a9f4-05663b1e4b48 /dev/vdb

# nova volume-detach vm1 81c8c61c-4889-423e-a9f4-05663b1e4b48

# cinder delete 81c8c61c-4889-423e-a9f4-05663b1e4b48
```
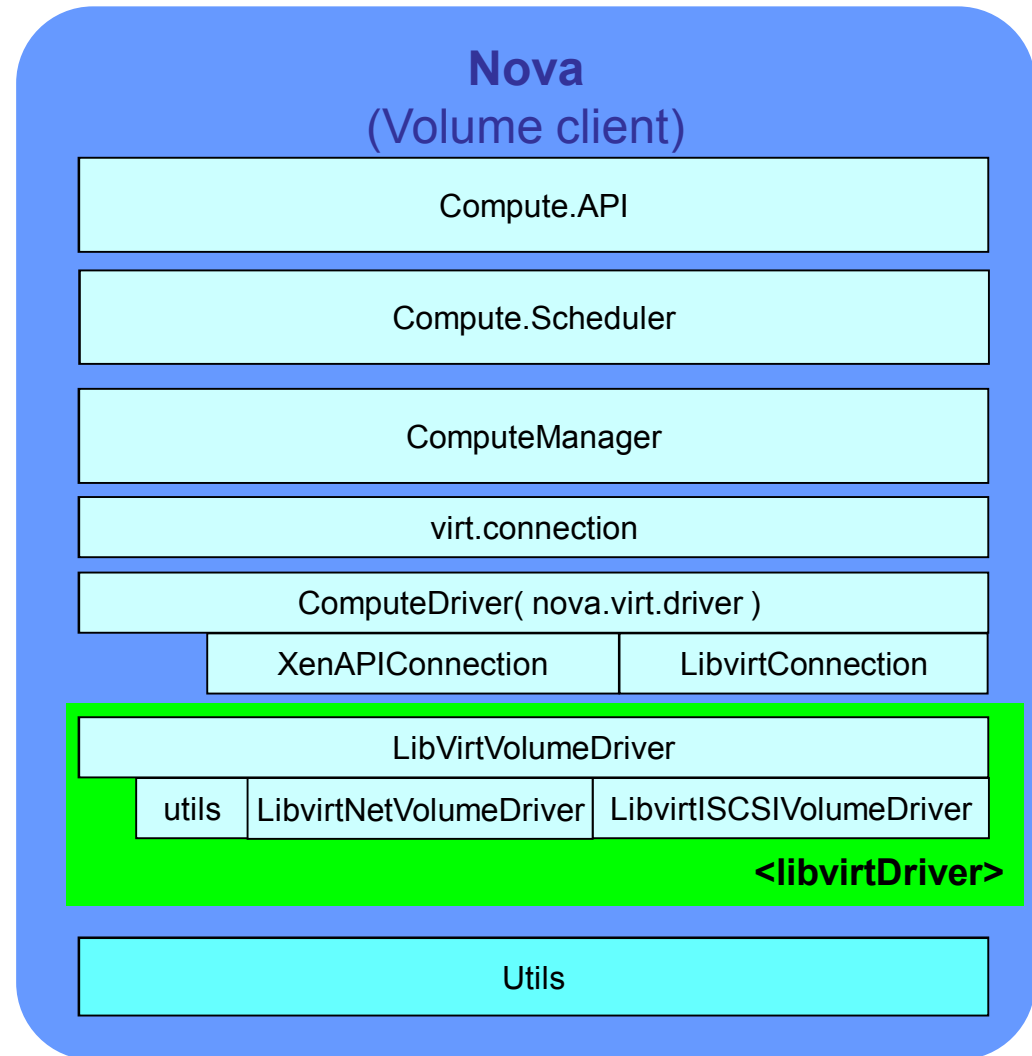

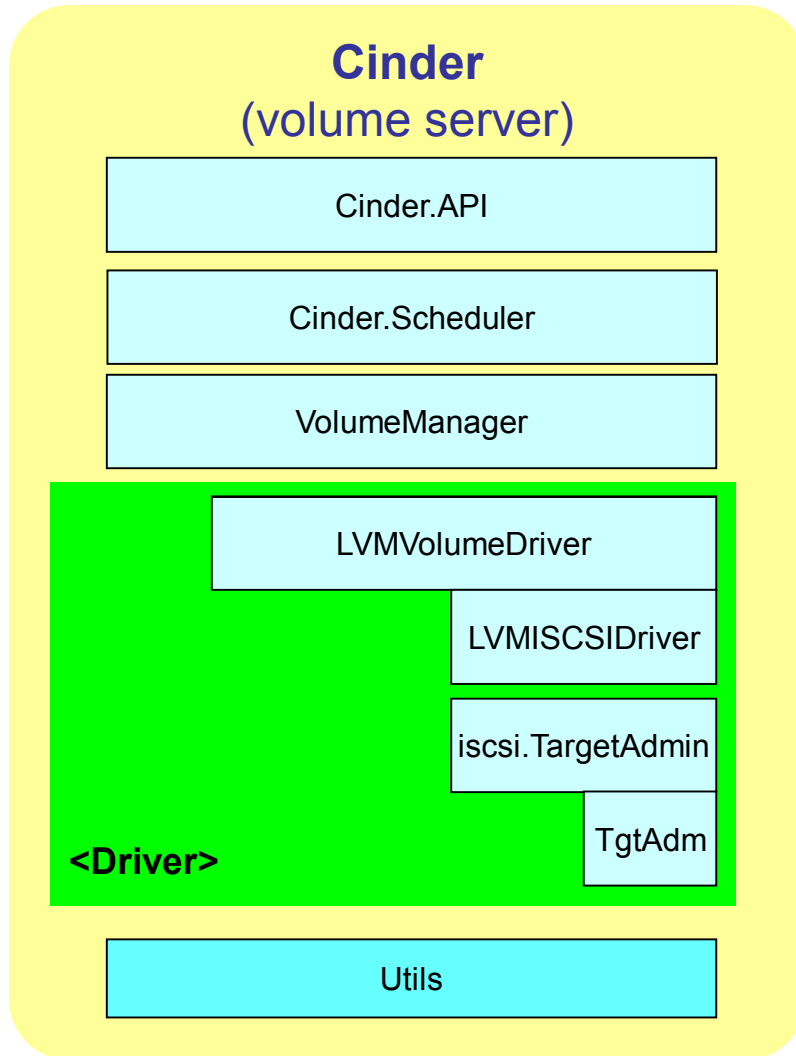

LVM/iSCSI Volume Stack

Cinder
(volume server)

- Cinder.API
- Cinder.Scheduler
- VolumeManager

<Driver>
- LVMVolumeDriver
  - LVMISCSIDriver
  - iscsi.TargetAdmin
    - TgtAdm

- Utils

Nova
(Volume client)

- Compute.API
- Compute.Scheduler
- ComputeManager
- virt.connection
- ComputeDriver(nova.virt.driver)
  - XenAPIConnection
  - LibvirtConnection

<libvirtDriver>
- LibVirtVolumeDriver
  - utils
  - LibvirtNetVolumeDriver
  - LibvirtISCSIVolumeDriver

- Utils

Research Institute

Implementation(1/2)

- ## Create volume

  - User: **POST** http://volume1.server.itri:8776/v1/{tenant_id}/volumes

  - Cinder-API: **CALL** cinder.volume.API().create()
  - Cinder.volume.API: **RPC CAST** cinder.scheduler()

  - Cinder.scheduler: **SCHEDULE** volume host
  - Cinder.scheduler: **RPC CAST** cinder.volume.create_volume()

  - Cinder.volume.manager: **CALL** cinder.volume.driver.create_volume()
  - Cinder.volume.manager: **CALL** cinder.volume.driver.create_export()

工業技術研究院
Industrial Technology
Research Institute

Implementation(2/2)

- ## Attach volume

  - User: **POST** http://novacompute1.itri:8774/v2/{tenant_id}/servers/{vm_uuid}/os--volume_attachments

  - Nova-API: **CAST** Nova.compute.API.attach_volume()
  - Nova.compute.api(): **RPC CAST** NOVA.compute.manager.attach_volume()

  - Nova.compute.manager. attach_volume: **RPC CALL** cinder.volume.initialize_connection()
  - Nova.compute.manager.attach_volume: **RPC CALL** virt volume driver attach_volume()
    - E.g. libvirt.driver.attach_volume() → volume_driver.connect_volume()
  - Nova.compute.manager.attach_volume: **RPC CALL** cinder.volume.attach()

Cinder Driver Status

- SAN
  - LVM based IET or TGT
  - SAN ISCSI
  - EMC SMI-S
  - HP 3PAR/LeftHand
  - Huawei
  - IBM StorwizeSVC/XIV
  - NetApp iSCSI
  - Nextenta NexentarStor
  - Windows
  - SolidFire
  - Coraid
  - Solaris
  - Sheepdog
  - Zadara
  - …

- NFS
  - GlusterFS
  - NetApp NFS
  - XenAPI
  - Coraid
  - Scality SOFS
  - …

- Object
  - Ceph RBD

Research Institute

Contributions (1/2)

- Add Cinder driver and Nova virt driver to promote your storage solution.

- Add Cinder scheduler to enhance different cinder drivers

Contributions (2/2)

- ## Cinder driver
  - create_volume()
  - create_export()
  - delete_volume()
  - delete_export()
  - ensure_export()
  - initialize_connection()
  - terminate_connection()
  - create_volume_from_snapshot()
  - create_snapshot()
  - delete_snapshot()
  - copy_image_to_volume()
  - copy_volume_to_image()
  - clone_image()

- ## Nova driver
  - attach_volume() / *connect_volume()*
  - detach_volume() / *disconnect_volume()*

- ## Cinder scheduler
  - schedule_create_volume()

工業技術研究院
Industrial Technology
Research Institute

Conclusions

- OpenStack Cinder defines a set of common methods to model block storage solutions for virtual machine

- Storage providers can easily integrate storage solution into Cinder for customer usage

- Storage customer can easily adopt different storage product via Cinder
